No part of this publication may be reproduced or transmitted in any form, or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1981 articles are the same as those shown for current articles.

MADE IN THE UNITED STATES OF AMERICA

CONTENTS OF VOLUME 14

Number 1, February 1981

Yutaka Nomura, and Masahiko Nakamura. An Experimental Approach to Medical Decision Problems 1

Yehezkel Yeshurun, Nachum Allon, and Zvi Wollberg. A Computer Aided Simulation of an Electrode Penetration into Deep Brain Structures 19

F. Gloria-Bottini, M. Coccia, and E. Bottini. Neonatal Jaundice in ABO Incompatible Infants. Computer-Assisted Evaluation of Risk of Hyperbilirubinaemia and Analysis of Differences between Sexes 31

Mary Woodyard and Baruch Hamel. A Natural Language Interface to a Clinical Data Base Management System 41

David B. Francis, B. Lynn Miller, and D. Woodrow Benson, Jr. A New Computer Program for the Analysis of Pediatric Scalar Electrocardiograms 63

David D. Wirtschafter, Margaret Scalise, Connie Henke, and Richard A. Gams. Do Information Systems Improve the Quality of Clinical Research? Results of a Randomized Trial in a Cooperative Multi-institutional Cancer Group 78

Lawrence F. Menten, Michael C. Kohn, and David Garfinkel. A Convenient Computer Program for Estimation of Enzyme and Metabolite Concentrations in Multienzyme Systems 91

Number 2, April 1981

Editorial 103

Robert A. Greenes. MUMPS: Second Decade Design Considerations 104

G. Octo Barnett, Daniel Souder, Peter Beaman, and Jon Hupp. MUMPS—An Evolutionary Commentary 112

Tamas Sandor, Daniel K., Kido, William B. Hanlon, and Calvin L. Rumbaugh. Automated Calvaria Analysis from Computerized Axial Tomographic Scans 119

T. Sandor, M. LeMay, D. K. Kido, and C. L. Rumbaugh. Automated Tissue Analysis from Computerized Axial Tomographic Scans 125

M. Reggio. Differential Diagnosis by Weighting Characteristic Signs of Two Diseases 131

Jay H. Lubin. A Computer Program for the Analysis of Matched Case-Control Studies 138

David H. Gustafson, Bruce Tianen, and John H. Greist. A Computer-Based System for Identifying Suicide Attemptors 144

G. Papakonstantinou and F. Gritzali. Syntactic Filtering of ECG Waveforms 158

Ben H. Jansen, Arie Hasman, and Roel Lenten. Piecewise Analysis of EEGs Using AR-Modeling and Clustering 168

Susan L. Norton, Anne V. Buchanan, David L. Rossman, Ranajit Chakraborty, and Kenneth M. Weiss. Data Entry Errors in an On-Line Operation 179

Number 3, June 1981

M. Goldberg and M. Alvo. Classification of Volume Distributions of Blood Cells by a Weighted χ^2 Goodness-of-Fit Test 199
Judith Rae Lumb and Louise McGill Morrison. A Computer Simulation of the Cellular Kinetics of the Thymus-Independent Humoral Immune Response 220
I. McMillian and Ch. E. Minder. Parameter Estimation for the One Compartment Open Model 232
Guus A. M. Hart, Hans Oosting, and Nico Nagelkerke. Least Squares Fitting of the Lognormal Curve 240
Hiromu Yawo, Yoshiya Shinagawa, Yasuko Shinagawa, and Tokugoro Tsunematsu. Principal Component Analysis of Systemic Lupus Erythematosus (SLE): A Proposal for Handling Data with Many Missing Values 248
J. Wanzer Drane and Charles T. Richardson. The Use of Generalized Michaelis–Menten Kinetics to Measure Sensitivity in Gastric Acid Secretion 262
P. F. Lemkin and L. E. Lipkin. GELLAB: A Computer System for 2D Gel Electrophoresis Analysis. I. Segmentation of Spots and System Preliminaries 272

Number 4, August 1981

Richard G. Cornell. The Estimation of Prevalence for the Evaluation of a Screening Program 299
Peter E. Cage, Ewart R. Carson, and Keith E. Britton. A Control System Model of Renal Blood Flow Regulation 304
B. F. Aycock, D. E. Weil, D. V. Sinicropi, and D. L. McIlwain. Television-Based Densitometric Analysis of Proteins Separated by Two-Dimensional Gel Electrophoresis 314
G. R. Howe and J. Lindsay. A Generalized Iterative Record Linkage Computer System for Use in Medical Follow-up Studies 327
Toshifumi Watanabe, Juniji Toyama, Hideaki Toyoshima, Hajime Oguri, Miyoshi Ohno, Toshiki Ohta, Mitsuharu Okajima, Yoshihide Naito, and Kazuo Yamada. A Practical Microcomputer Based Mapping System for Body Surface, Precordium, and Epicardium 341
P. F. Lemkin and L. E. Lipkin. GELLAB: A Computer System for 2D Gel Electrophoresis Analysis. II. Pairing Spots 355
Steve M. Collins and Robert C. Arzbaecher. An Efficient Algorithm for Waveform Analysis Using the Correlation Coefficient.. 381

Number 5, October 1981

A. Albert, J. P. Chapelle, and J. P. Smeets. Stepwise Probit Discrimination with Specific Application to Short-Term Prognosis in Acute Myocardial Infarction 391
Ary L. Goldberger and Valmik Bhargava. Peak-to-Peak Amplitude of the High-Frequency QRS: A Simple, Quantitative Index of High-Frequency Potentials 399
P. F. Lemkin and L. E. Lipkin. GELLAB: A Computer System for Two-Dimensional Gel Electrophoresis Analysis. III. Multiple Two-Dimensional Gel Analysis 407
Lynette Hirschman, Guy Story, Elaine Marsh, Margaret Lyman, and Naomi Sager. An Experiment in Automated Health Care Evaluation from Narrative Medical Records 447
Ary Goldberger and Valmik Bhargava. Computerized Measurement of the First Derivative of the QRS Complex: Theoretical and Practical Considerations 464
W. Gregory, R. Bell, and R. R. P. Jackson. An Automated Clinical Research and Data Analysis System 472
Suzanne, B. Knoebel, D. Eugene Lovelace, James J. Heger, Douglas P. Zipes, and Charles Fisch. A Computerized Cardiovascular Data Base System: Application in Arrhythmia Research .. 482

Number 6, December 1981

A. Ben Jebria, A. Mallet, J. L. Steimer, C. Hatzfeld, and J. F. Boisvieux. Finite Element Simulation of Gas Transport in Proximal Respiratory Airways: Comparison with Experimental Data 493
Manabu Takahashi. A Multichannel Method for the Analysis of DNA Content Distribution Using Flow Cytometric Data 506
J. J. Capowski and M. J. Sedivec. Accurate Computer Reconstruction and Graphics Display of Complex Neurons Utilizing State-of-the-Art Interactive Techniques. 518
Frederick R. Bartram, Raymond E. Ideker, and William M. Smith. A System for the Parametric Description of the Ventricular Surface of the Heart 533
Randy L. Teach and Edward H. Shortliffe. An Analysis of Physician Attitudes Regarding Computer-Based Clinical Consultation Systems 542
Jay T. Dittmann, Michael S. Leonard, and Jay Goldman. Health Information System Transferability Evaluation..... 559
Conrad Wall III, Harvey S. Borovetz, James J. Murphy, and Robert L. Hardesty. System Parameter Identification in Transport Models Using the Fast Fourier Transform (FFT)..... 570

J. A. Salomon, E. Ben Ezra, H. Atlan, F. Fogelman, and G. Weisbuch. A Simple Algorithm to Optimize Multiparametric Searches in a Nuclear Medicine Patient Data Filing System 582
David H. Lowenstein, William R. Braithwaite, Darrell N. Jones, and Robert B. Rutherford. Computer Diagnosis in a Vascular Diagnostic Laboratory 592
Author Index for Volume 14 606

Information for Authors

Computers and Biomedical Research accepts papers with the understanding that they are contributed solely to this Journal and consist of new research material not published previously except as an abstract or review or tutorial articles clearly labeled as such, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Computers and Biomedical Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

All manuscripts should be submitted to the Editor:

Dr. Homer R. Warner,
Department of Medical Biophysics and Computing,
Latter-day Saints Hospital,
325 Eighth Avenue,
Salt Lake City, Utah 84143

Whenever a previously published paper by the author is important background for methods, data, or discussion in a manuscript, two reprints of the paper containing such material should accompany the manuscript to assist reviewers.

Manuscripts returned to authors for revision are considered "accepted for publication" as of the date an acceptable revised complete manuscript is returned to the editorial office. The editors and publishers cannot assume responsibility for manuscripts lost in the mail. Authors should therefore retain a complete copy for their files.

Form. Manuscripts should be typewritten and double-spaced throughout (including tables, footnotes, references, and figure captions); the original typescript should be prepared on one side of a good grade of $8\frac{1}{2} \times 11$-inch white paper, with 1-inch margins on all sides. Mimeographed or duplicated manuscripts will be accepted *if they are indistinguishable from good typed copies.*

Submit two complete copies in order to expedite processing of the manuscript. Each copy *must* include all figures and tables.

Number the pages consecutively. *Page 1* should contain the article title, author(s), and affiliation(s); at the bottom of the page type a short running head title not exceeding 45 characters (including spaces), and the name and complete mailing address (including zip code) of the person to whom proofs should be sent. *Page 2* should contain a short abstract, approximately 100 to 150 words in length.

Headings. The organization of the paper must be clearly indicated by appropriate headings and subheadings.

Abbreviations. Do not use final periods after abbreviations of measure (cm, sec, kg, etc.) in text or in tables, except for "in." (inch). Use the American Chemical Society Handbook as a guide.

List of Symbols. A typewritten list of identified symbols should be submitted along with the manuscript. The list should not define the symbols mathematically, but should serve to identify them typographically. The list will not appear in print, but is essential in order to avoid costly corrections in proof.

Equations. Number equations consecutively, with the number placed in square brackets to the extreme right of the equation. Refer to equations as Eq. [3] or simply [3] except at the beginning of a sentence, when the word Equation should be spelled out. Punctuate equations to conform to their place in the syntax of the sentence.

Footnotes. Use only when absolutely necessary, in which case type the footnotes consecutively, double-spaced, on a separate sheet of paper in the order of their appearance in the text. Use Arabic numbers 1, 2, etc. In the text refer footnotes by superscript 1, 2 etc. Footnotes to the title should be indicated by superscript*, †, etc.

Tables. Number tables consecutively with Arabic numerals in order of their appearance in the text. Type each table, double-spaced throughout, on a separate sheet; avoid vertical rules. Supply a short descriptive title below the table number. Type table footnotes, lettered *a*, *b*, etc., at the end of the table.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

It is essential that all illustrations be drawn with a lettering set, and therefore in finished form ready for the engraver. Lettering on the original drawing should be large enough to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than $8\frac{1}{2} \times 11$ inches, with coordinates properly labeled; grid lines that are to show in the engraving should be inked in black. Photographs should be submitted as glossy prints (5×7 or 8×10 inches) and not marred by staples, paper clips, or pencil marks. Original drawings no larger than $8\frac{1}{2} \times 11$ inches are preferred.

Xerox copies are not acceptable.

Charges to authors. Exceptionally numerous illustrations or elaborate tables will require special arrangement with the publisher for sharing the cost of reproduction. Color figures or plates will be accepted only at the author's expense for engraving, printing, and handling.

References. These should be cited in the text by consecutive underlined numbers in parentheses and listed at the end of the paper in numerical order. Note the following style for book and journal citations:

1. Harris, J. A., Melby, Gordon M., and Bickford, Reginald G. Computer-controlled multi-dimensional display device for investigation and modeling of physiologic systems. *Comput. Biomed. Res.* **2,** 519 (1969).
2. Sterling, T. D. and Perry, H. Computation of radiation dosages. *In* "Computers in Biomedical Research" (R. W. Stacy and B. D. Waxman, Eds.), Vol. 1, pp. 439–464. Academic Press, New York, 1965.
3. Winters, R. W., Engel, K., and Dell, R. B. "Acid Base Physiology in Medicine, a Self Instruction Program." The London Co., Westlake, Ohio, 1967.

Abbreviations of journal names should follow the style of Chemical Abstracts' *Service Source Index.* Unpublished observations and personal communications should be cited in the text as such, and should not be included in the reference list.

Author's alterations in excess of 10% of the cost of composition will be charged to the author.

Reprints. 50 reprints will be supplied free of charge. Additional reprints can be ordered on the form accompanying galley proof.

COMPUTER-ASSISTED MEDICAL DECISION MAKING

By HOMER R. WARNER

CONTENTS: INTRODUCTION. DATA SOURCES. History. Physical Examination. Electrocardiography. Cardiovascular Laboratory. Pulmonary Laboratory. Clinical Chemistry as a Data Source for Medicine. Data for Hematology Decisions. Data Logging in the Operating Room. Intensive Care Unit. Infectious Disease Data. Pharmacy. The Medical Record Room as a Source of Data for the Patient's Computer File. Nursing Station. Blood Bank. Accessing Information from Radiology. Interactive Patient Management Protocols. PATIENT DATA FILE. Organization. Data Dictionary. Data Compression. COMPUTER REPRESENTATION OF MEDICAL KNOWLEDGE. Organization of a Decision System. Intellectual Tools. Sources of Decision Criteria. CONSULTATION MODES. The Report as a Media for Consultation. Consultation through Direct Query of the System. Urgent Feedback. Closed-Loop Control. COMPUTER AS A TRAINING TOOL FOR MEDICAL DECISION-MAKING. Glossary. Index.

1979, 208 pp. *ISBN: 0-12-735750-5*
